"We must build an agenda for speedy yet sustainable economic growth that is inclusive of all, respectful of individuals, responsive to innovation and responsible towards the future generations".

- Shri Narendra Modi

The economy is witnessing an unprecedented transformation and organizations nationwide are facing challenges in matching the operational efficiency with the sustainable development goals. Scarcity of resources has put immense pressure on the supply chains across the nation leading to unequal distribution of resources and massive societal challenges. The traditional Indian wisdom has always given paramount importance to harmonious and indivisible relationship between nature and mankind. Over the time, while selfishly pursuing modernization, humans have frequently compromised with the requirements of a more sustainable environment. As a result, environmental depletion is evident with the prevalence of deforestation, pollution, greenhouse gases, climate change etc. In the present time, the need for Sustainable Development is not only for the survival of mankind but also for its future sustenance. It continuously seeks to achieve social and economic progress besides meticulously planning the accomplishment of immediate as well as long-term goals for both living and non-living beings of the planet. It is imperative therefore, to make efficient and effective use of strategy, skills, and innovation for achieving sustainable development.

Governments worldwide have formulated and implemented sustainable development strategies. The Indian government under the leadership of our hon'ble Prime Minister Shri Narendra Modi is also focused on making collaborative efforts and robust strategies to promote sustainable development. India is also holding the 2023 G-20 presidency under the motto "Vasudhaiva Kutumbakam" or "One Earth · One Family · One Future". The theme of the G-20 summit this year addresses LiFE (Lifestyle for Environment) and is fixated upon valuing all living organisms as well as their interrelatedness with the planet and the outer space.

There is a range of skills needed to develop & deliver sustainable communities. It is of utmost significance to have the strategic skill for encouraging people to collectively develop and implement innovative actions that promote sustainable development. Generic skills and knowledge make the difference by providing the ability to create a vision for achieving sustainable development. Reflecting on the role that everyone will play in the society a constant evaluation of their actions are essential for the benefit of the planet.

Innovation is an indispensable tool for increased productivity and economic growth. It can lead to the structural transformation of economies, at different stages of development. However, the potential of a country to benefit from technological developments through innovation is likely to be greater when there is effective access to technology globally. Countries can improve their innovative capacity by leveraging their strengths, addressing weaknesses in innovation, and learning from best practices of the leaders. All these are essential for creating an enabling environment for inclusive and sustainable economic growth.

Indian businesses must strike a balance between needs of both current and future generations needs to accelerate their respective economic growth and pave the way forward for sustainable development using all the three pillars of Strategy, Skill and Innovation.

- To identify nationwide challenges for attainment of Sustainable Development Goals.
- To discuss sustainable business strategies, skills and innovative models.
- To prioritize the enablers and drivers of Sustainable development.
- To foster use of strategy, skill and innovation in businesses, operations and delivery leading to sustainable development.
